SUMMARY

Senior Software Engineer specializing in the Microsoft .NET stack, **Azure Cloud**, and full-stack **enterprise software** development. Experienced in the **full software development lifecycle (SDLC)**, delivering applications from concept through deployment while modernizing and maintaining legacy systems. **Proficient in C#, ASP.NET Core, SQL Server, Angular, and Azure DevOps** with extensive experience in **software architecture, system design, cloud architecture, RESTful API design**, and building **scalable, high-performance systems**. Holds multiple **Claude AI certifications** and understands how to **effectively leverage AI** as a development tool—using it to **increase productivity** where appropriate while relying on engineering expertise, critical thinking, and sound software design where human judgment provides the **best outcomes**.

SKILLS

Languages: C#, SQL, XAML, WPF, JavaScript, TypeScript, Java, Python, HTML, CSS

Microsoft & Full-Stack: .NET, ASP.NET Core, WPF, UWP, Angular, React, React Native, Entity Framework, LINQ

Cloud & DevOps: Microsoft Azure, Azure DevOps, Azure Pipelines, CI/CD, Docker, Kubernetes, Git, Linux, IIS

Architecture & Engineering: Software Architecture, Enterprise Software, System Design, Distributed Systems, Full Software Development Lifecycle (SDLC), Full-Stack Development, RESTful API Design & Development, Cloud Architecture, Multi-Tenant Architecture, Scalable Systems, Legacy Modernization, Performance Optimization, Authentication & Authorization, Application Security, Database Design, SOLID Design Principles

Databases: Microsoft SQL Server, Entity Framework, Code-First Development, Stored Procedures, Query Optimization

Testing & Monitoring: NUnit, XUnit, MSTest, Application Insights

AI: Multiple Claude AI Certifications, GitHub Copilot, ChatGPT, AI-Assisted Software Development

Tools & Technologies: Godot, Aseprite, Firebase, Gradle, ComponentOne, Telerik, SSRS, TFS, LaTeX

Methodologies: Agile, Scrum, Kanban, Product Ownership, Scrum Master

WORK EXPERIENCE

SPARQ | Senior Software Engineer Consultant

Remote, USA | April 2023 – Current

- Some clients I've worked with:
 - Well-known **Fortune 50** US-Based International Logistics Company with over **\$85 billion/yr revenue** (WPF, Angular, ASP.Net Core, SQL Server)
 - A privately-traded Insurance Company with over **\$6 billion/yr revenue** (ASP.Net Core, Angular, SQL Server)
- Led the complete redesign of the client's .NET insurance application and **software architecture**, resulting in over \$30 million in profits during the first month after deployment to **Azure Cloud** while improving scalability and long-term maintainability.
- Upskilled the internal team, provided **Agile leadership**, and restructured the application's architecture to outperform external services, delivering significant **performance optimization** and increased user engagement.
- Mentored developers through code reviews, architecture discussions, and implementation guidance while promoting maintainable engineering practices.
- Enhanced application security through improved **authentication & authorization**, redesigned enterprise applications (UWP, WPF, Angular, .NET), and modernized legacy systems while supporting seamless data flow, completing the project ahead of schedule and under budget.

- Partnered with product owners, stakeholders, and engineering teams to define technical roadmaps and architectural decisions for enterprise software initiatives.

365 LABS | Senior Software Development Engineer

Baton Rouge, LA | Sept 2019 – April 2023

- Led the development of an **intuitive** and **dynamic UX design** for validations with user-friendly descriptions of rules and a **streamlined** editing feature, consolidating scattered validation tasks into one convenient location, resulting in improved **efficiency** and **reduced user stress**.
- Successfully designed and developed multiple enterprise software projects through the **full software development lifecycle (SDLC)** utilizing the Microsoft .NET stack, Azure DevOps, and **CI/CD** pipelines, resulting in adoption by thousands of users.
- Designed and implemented secure **authentication & authorization**, NuGet packages, automated release management, and **CI/CD** pipelines using Azure DevOps, improving deployment reliability, scalability, and developer productivity.
- Redesigned the architecture of production RESTful APIs into a scalable **multi-tenant distributed system**, enabling a single API instance to support multiple client databases while leveraging stored procedures and database functions for significant cross-service performance improvements.

EDUCATION

MS. Advanced Mathematics Spec. Algorithms, Data Structures, Databases

Thibodaux, LA | Aug 2019

Nicholls State University

Teacher Assistant (TA): Foundations of Logical Analysis, Statistics, Number Theory

Student/Graduate Assistant (GA): Taught and mentored Mathematics on campus from Sophomore to MS Graduate

PROJECTS

INDIE GAME DEVELOPER 2026

Godot, C#, Pixel Art, Git, Aesprite, AI-Assisted Development

Sole developer of a commercial strategy game from concept to release using Godot and C#. Responsible for **software architecture**, **system design**, gameplay programming, procedural generation, AI systems, data-driven frameworks, UI/UX, **performance optimization**, and custom development tools. Applies modern software engineering practices throughout the **full software development lifecycle (SDLC)** while leveraging AI-assisted development where appropriate to improve productivity without sacrificing maintainability or code quality.

GAME SCRIPT MANAGER 2024

Java, Gradle, Docker, Linux, C#, Sql, EF

Designed and developed an AI-driven management platform and API that automatically optimizes task scheduling across multiple accounts. Implemented configuration systems, logging pipelines, and data analysis tools to improve automation efficiency and decision-making.

RECIPE PLANNER 2022

Angular, Typescript, C#, Google Firebase, Python, Artificial Intelligence

Built a full-stack recipe recommendation platform using Angular, TypeScript, C#, Firebase, and Python. Implemented advanced filtering, personalized recommendations, and cloud-based data management.
